REPORT ON EDUCATIONAL VISIT TO BOOK EXHIBITION

An educational visit to a Book Exhibition was organized for the students with the objective of enriching their academic knowledge and fostering a strong reading culture. The visit proved to be a valuable learning experience beyond the classroom.

Book exhibitions expose students to a wide variety of books related to different subjects, competitive examinations, literature, research, and general knowledge. Students get an opportunity to explore newly published books, reference materials, journals, and digital learning resources, which enhances their subject understanding and academic interest.

The visit also helps students develop the habit of reading by motivating them to choose books according to their interests and learning needs. Interacting with publishers and authors enables students to understand the importance of books in intellectual growth and lifelong learning. It also familiarizes them with current trends in education, teaching methodologies, and research publications.

For prospective teachers, a book exhibition is particularly useful as it provides access to teaching aids, pedagogical books, educational psychology texts, and curriculum-based resources that support their professional development. The visit encourages critical thinking, independent learning, and informed decision-making while selecting academic materials.

Overall, the visit to the Book Exhibition was highly beneficial. It broadened students' knowledge, promoted reading habits, and strengthened their academic and professional outlook, thereby fulfilling the objectives of experiential and holistic education.

Its main motive was to promote interest and enthusiasm in learning and teaching biology in the minds of the student teachers by undertaking various practical out of the box strategies that included field trips, visits to various places of educational significance to biology, activities pertaining to biology. The Eureka Club aims towards promoting interest and enriching knowledge in science subject on the whole rather than biology alone. The visit to Book Exhibition highlights this vision of the club. The visit to Book Exhibition was a remarkable one where we embarked on **Ignited the flame of reading & observing were developed.**
